

## Competitors VS. 4K Aluminum

### Competitors

### 4K Aluminum

When comparing 4K Aluminum products with other similar industry products, there truly is no comparison.

### Competitors

- ◇ Competitors aluminum post, beams and lattices are roll formed and require steel inserts.
- ◇ Competitors beams can only span between 8'-9' without a support post.
- ◇ All post and beams are secured together with unsightly brackets exposed to the naked eye.
- ◇ Competitors structures are coated with silicone polyester and cured in a paint line oven. 4K is powder coating, powder coats are more efficient thanks to the electrostatic process, which reduces waste by 95%.

No Inserts Required

No Soft, Roll-Formed Aluminum

No Unsightly Brackets

### 4K Aluminum

- ◇ Posts, beams and lattices are **extruded** 6061-T6 aircraft alloy aluminum, **NOT** roll formed, and have no steel inserts.
- ◇ Our beams can span up to 34' without any support between two posts using our extruded beam connector for added strength.
- ◇ No miter joints showing exposed aluminum with designs that do not show any screws, unlike our competition.
- ◇ Powder coated using the latest Italian-made equipment to AAMA 2604 standard, gold chromate primer.
